

Water Distribution and Transmission Systems Category

Vaughn, Coast & Vaughn, Inc. has designed countless miles of water systems for municipalities, Public Service Districts and communities over the past 30 years. Water main sizes from 24" diameter down to 2" diameter, from open trench type construction to horizontal directional drilling, we have an extensive amount of experience.

Rather than list the multitude of projects we have completed we provide a short list of our most recent accomplishments below.

1. Muskingum County Water, Muskingum County, Ohio
RT. 555 Water System Extension

This project consists of 40,000 feet of water main ranging in size from 12" thru 4" plus a 16" diameter crossing of the Muskingum River. Total Construction Cost \$1,500,000.

2. City of Martins Ferry
County Route 4 Water Main Replacement

This project includes the replacement of 27,000 feet of 10" thru 6" water main. The total construction cost \$2,900,000.

3. Muskingum County Water, Muskingum County, Ohio
Northwest Water Transmission Main

This project included 18,000 feet of water transmission main ranging in size from 20" to 12" in diameter. The total Construction Cost was \$1,500,000.

4. Town of Newburg, WV
Fellowsville Water Distribution System

This project consisted of 70,000 feet of water mains ranging in size from 8" to 2" in diameter. The total construction cost was \$1,900,000.

5. Ohio County Development Authority, Wheeling, WV
Highlands Water Transmission Main

This project consisted of 23,000 feet of 16" diameter water transmission main. The total construction cost was \$2,900,000.
